

## Product Overview

The 10-150 is a 5-metre power ISO extension cable. It is used to extend the black 8-way ISO power connection behind a vehicle radio or from a SOT lead.

## Please Note

This cable is for the black speaker ISO connector only. For rear SOT lead installations, two cables may be required. As you will need to get there, and back

## Tools Required

- Trim panel removal tools
- Phillips Screwdriver
- Cable ties
- Torch/ work light

## Installation Steps

1. Switch off the ignition and remove the key.
2. Locate and disconnect the black ISO power connector behind the radio or at the SOT lead.
3. Plug the 10-150 cable between the two matching black ISO speaker connectors.
4. Route the cable to the required position, making sure it is not trapped, stretched, or near moving parts.
5. Secure the cable and refit any removed trim to hide the cable.

## Testing

- Switch on the radio system
- Check that everything powers up and does not cut out working.
- If the radio does not retain information such as EQ settings, then the red and yellow wires may need to be switched positions.
