

10-641

Camera power relay

InCarTec

10-641 is a power relay to be used when installing a camera into a vehicle.

Sometimes a reverse power feed from a reverse light may not be strong enough to power a camera or may create interference.

This relay can use a weak reverse trigger to switch on a better 12v power feed for a camera.

Fitting instructions.

Yellow wire - Connect to a good permanent 12v feed

Black wire - Connect to ground

Purple wire - Connect to the reverse trigger

Red wire - 12V output from the relay (activated by the reverse feed).
