

BMW X1 double DIN installation

Using the fascia 50-889 it is possible to install a double DIN head unit into a BMW X1. Modifications to the fascia and dashboard are required. We strongly recommend that these modifications are done by an experienced car audio technician.

The bottom edge of the fascia needs to be cut off to fit into the dashboard.

The dashboard panel also needs to be trimmed to allow the fascia and head unit to fit.

This needs to be done very carefully!

Below are pictures showing before and after.
