

49-MB-02

Mercedes CANbus steering wheel control interface

InCarTec

Steering wheel control interface for Mercedes cars with a Quadlock connector at the rear of the radio.

The interface will retain the use of the audio steering wheel controls and provide ignition, illumination, speed pulse, reverse gear and handbrake outputs.

Before connecting the interface to the car, make sure that the patch lead is connected to the interface first.

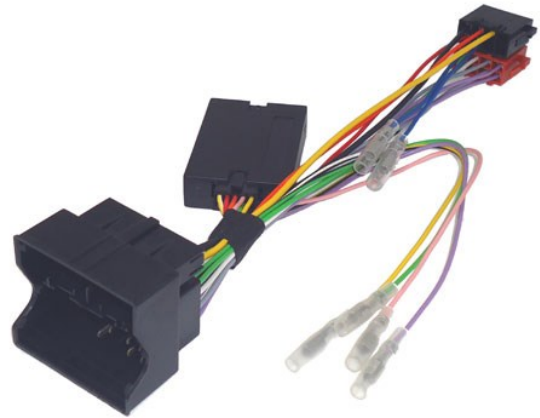

Output:

Speed pulse - pink wire

Reverse gear - purple wire

Parking brake - green wire

Mute - yellow/black wire
